

**A GreenCoin is a peer-to-peer digital asset. The GreenCoin ecosystem is a mechanism for which renewable processes are incentivized. The GreenCoin Foundation awards GreenCoins daily to producers as a reward for their relative production.**

GreenCoins are distributed towards the production of a useful product, commodity or service that comes at a marginal carbon benefit to the global average of the same useful activity.

For example, a person with a home solar array is a producer of electrical power at marginal savings of 481 g CO<sub>2</sub> per kWh produced. The solar array owner can receive GreenCoins daily for their work.

## Benefits:

- Participation is FREE!
- GreenCoins can be [traded for Bitcoin](#) (and to USD, to buy more coffee!)
- Produce more power, get more GreenCoins. The incentive works FOR the system incentivizing more green production!
- GreenCoin is not a tax on a "more polluting" system, it is simply an additional incentive for *your* greener system.
